## Industrial Style (IP65) Digital Pressure Meter

IN-PRESS Pressure Meter model P-502CI

### > Introduction

Bronkhorst® model P-502CI digital electronic pressure meters have a well-proven compact thru-flow design. The instruments include a diaphragm type piezo-resistive pressure sensor for pressure measurement. The pressure meter performs with high accuracy and repeatability. The industrial style (IP65) IN-PRESS model P-502CI can optionally be combined with a close-coupled control valve to act as a “back pressure controller” for upstream (P<sub>1</sub>) pressure control or a “forward pressure controller” for downstream (P<sub>2</sub>) pressure control.

## > Model number identification

## > Measuring principle

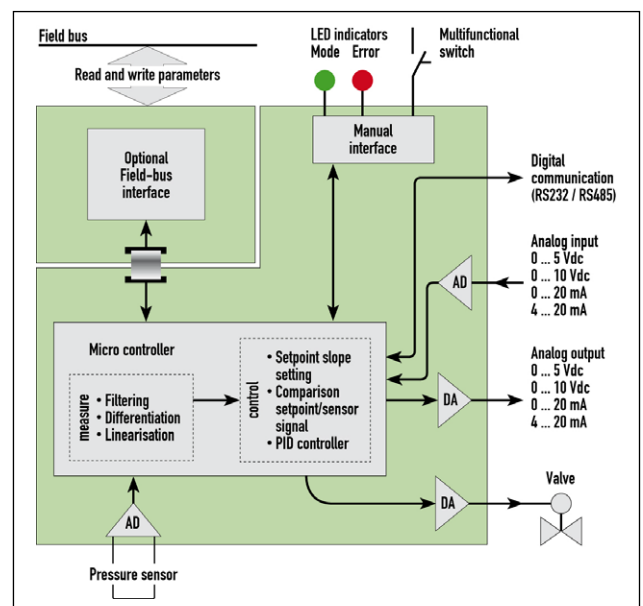

The Bronkhorst IN-PRESS pressure sensor is a piezo-resistive bridge on the surface of a silicon chip, with a pressure diaphragm, whose thickness determines the pressure range. When a pressure acts on this chip, the diaphragm flexes, and the resistor values of the bridge alter in proportion to the pressure. The measuring cell is separated from the external pressure by a thin, sensitive stainless steel diaphragm, and the sealed off cavity between diaphragm and cell is filled with oil. Since the standard oil filling is flammable, Bronkhorst advises to take precautions when oxygen or any other explosive fluid is used.

Functional scheme of the pressure sensor

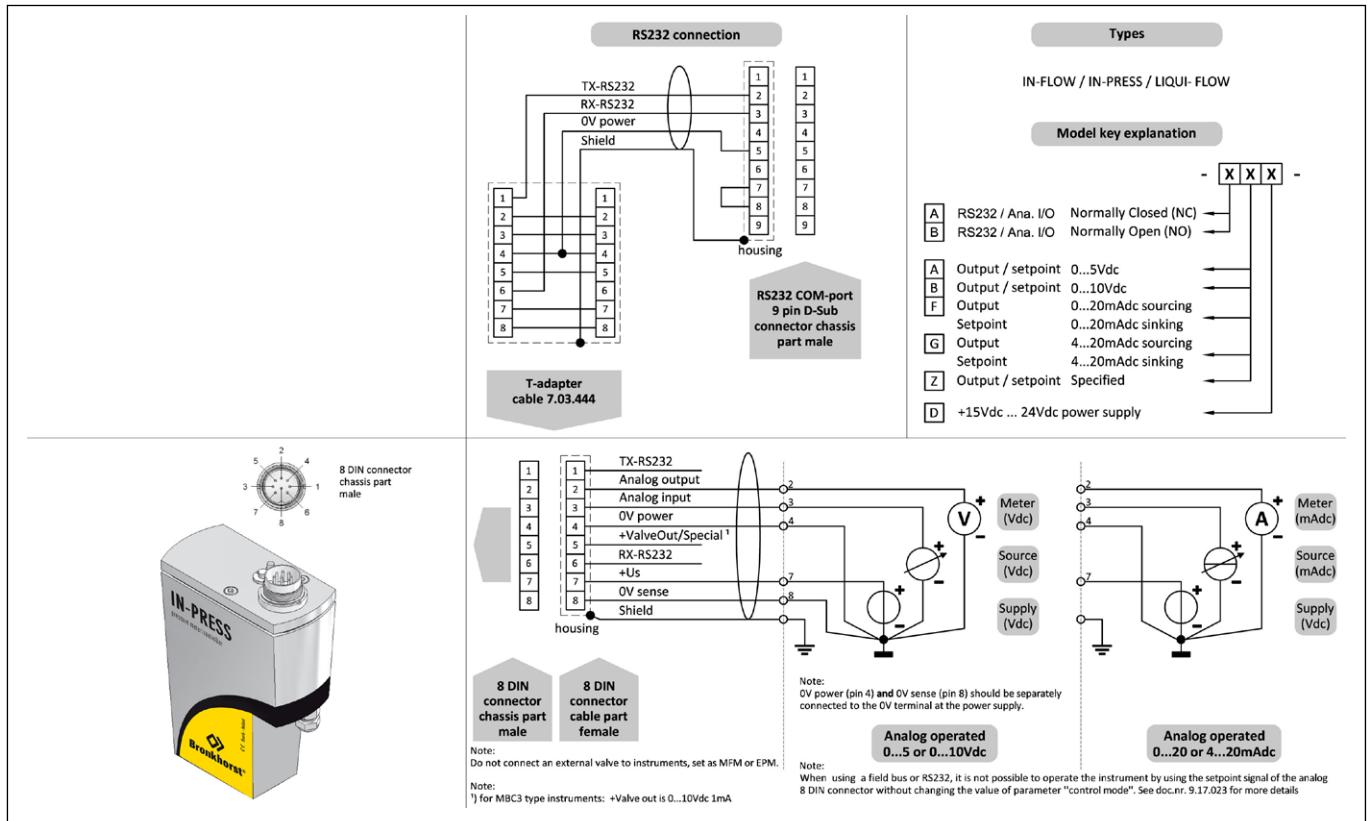

## > State of the art digital design

Today's IN-PRESS series are equipped with a diaphragm type piezoresistive pressure sensor and a digital pc-board, offering high accuracy, excellent temperature stability and fast response. The basic digital pc-board contains all of the general functions needed for measurement and control. In addition to the standard RS232 and RS485 output, the instruments also offer analog I/O. Furthermore, an optionally integrated interface board provides DeviceNet™, PROFIBUS DP, Modbus-RTU or FLOW-BUS protocols via a separate connector.
